

Providing Inherent Synergistic Activity to Support Natural Wound Closure

AmnioBand®

ALLOGRAFT PLACENTAL MATRIX
MEMBRANE

AmnioBand® Membrane serves as a scaffold for the replacement of damaged or inadequate integumental tissue.

Comprised of human amnion and chorion, this bi-layer placental allograft can aid in native tissue restoration and remodeling, while providing optimal coverage in a wide variety of sizes.

Different By Design

MTF Biologics is a nonprofit organization that's committed to patients and caregivers, not shareholders. As the leading tissue bank in the world, we're focused on honoring the gift of donation by serving patients and advancing the science of tissue transplantation.

Philosophically

- We maximize the gift of donation by constantly researching new tissue forms and clinical needs, leading to innovative new solutions
- Our dedication to life-changing and life-saving work has been, and always will be, science-driven and patient-focused

Economically

- Lowest demonstrated graft cost to closure evidenced by published peer-reviewed prospective Level 1 publications⁶
- Available in multiple sizes to minimize waste

Scientifically

- Aseptic processing balances tissue safety and quality while ensuring the preservation of biological components¹⁻⁴
- Each lot passes USP<71> Sterility Tests and our validated chemical disinfection method achieves the equivalent of SAL 10⁻⁶ ⁵

Clinically

- Our robust offering of data showcases AmnioBand Membrane in support of closure activities in 82-90% of chronic wounds^{6,7}
- Multiple peer-reviewed prospective Level 1 publications showcase greater overall closure in half the time of standard of care^{6,7}

Providing Inherent Synergistic Activity to Support Natural Wound Closure

Aseptic Processing Retains Inherent Biological Components

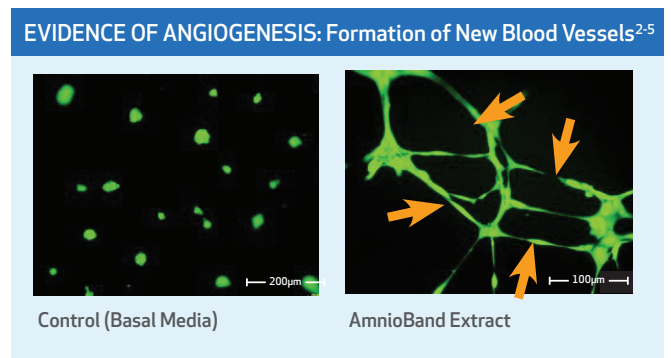

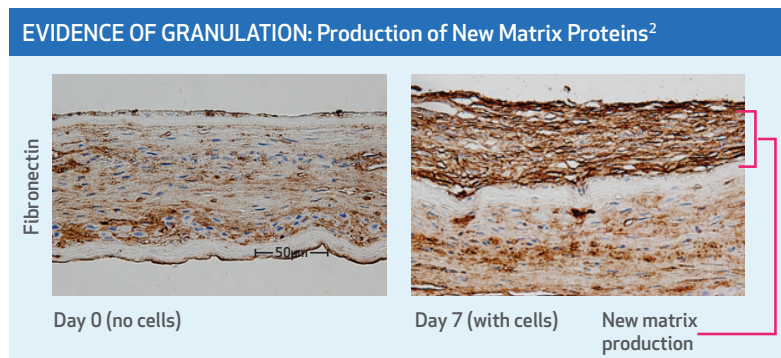

Derived from cesarean sections of healthy pre-screened mothers, AmnioBand Membrane is processed to retain inherent biological components and native tissue structure.

Amniotic membranes are known to contain a suite of biological matrix proteins, cytokines and growth factors that have been shown to support tissue remodeling.^{8,9} Aseptic processing maintains and preserves the graft's natural flexible structure and function, and offers direct compatibility with the extracellular matrix.

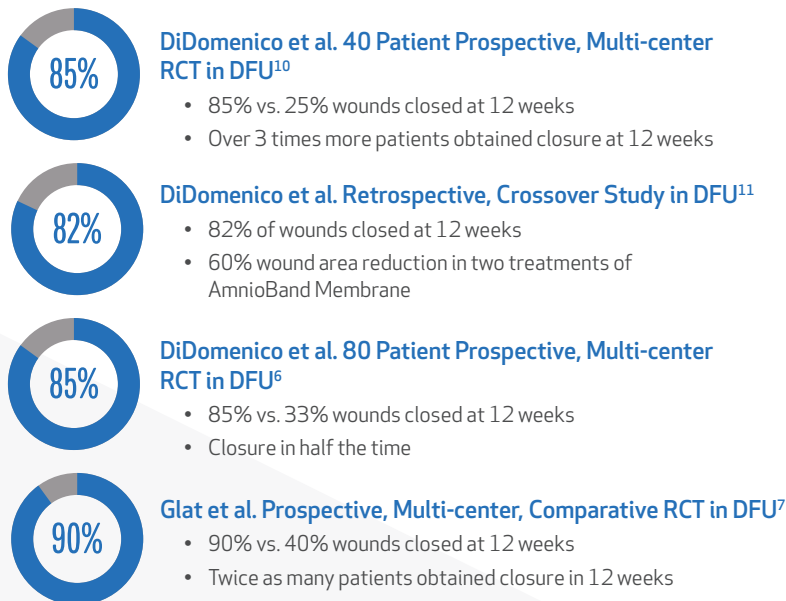

Scientific and Clinical Evidence in Support of Closure Activities¹⁹

Cellular Response to AmnioBand Membrane

Summary of Clinical Outcomes

Verified Presence of Growth Factors and Cytokines:

Growth Factors and Cytokines	Native Function	AmnioBand Membrane
IL-6; IL-10	Anti-inflammatory ¹²⁻¹⁵	✓
β-DEFENSIN-1	Anti-microbial ¹⁶⁻¹⁹	✓
PDGF-AA	Angiogenic ²⁰⁻²³	✓
PDGF-BB		✓
VEGF	Cell Proliferation and Remodeling ²³⁻²⁶	✓
TGF		✓
FGF-2		✓
EGF		✓

MTF Biologics is a nonprofit organization dedicated to offering the highest quality tissue solutions, without compromise.

Since our founding in 1987, we've been committed to providing quality tissue for a variety of medical purposes. We constantly strive to improve natural healing outcomes by advancing the science of tissue processing through research. Throughout our history, we're honored to have distributed more than 9 million grafts that have been used to save and heal lives.
